INVESTMENT PHILOSOPHY

We believe that excellent long-term investment performance in global emerging markets equities can be best delivered by working as a team to make investments in quality businesses at attractive prices.

INVESTMENT APPROACH

Our emerging markets investment thesis is based on conviction of the faster growth potential of low- and middle-income economies due to demographics and economic convergence, and the inefficient pricing in these markets.

Our investment process is structured to enable a cohesive team of experienced portfolio managers to generate fundamental research insights and, subject to rigorous challenge, express those insights in the portfolio. As long-term investors, we believe the sustainability of our portfolio companies' business practices and their impact on all constituents including the environment, society, employees and shareowners are integral to the assessment of quality in our investments.
